

F1 Driver Championship Performance Analysis

Complete Project Documentation

IQRA University Islamabad - AIN-375 Data Visualization

Student: Farhan Saleem Kiani (615132)

Date: 11 June 2026

PROJECT OVERVIEW

This is a comprehensive F1 Driver Championship Performance Analysis project using Python data science tools to analyze, visualize, and understand Formula 1 racing driver performance across multiple seasons.

WHY F1 DATA?

- Rich historical data spanning 1950-2024
- Multiple performance metrics (wins, podiums, points, consistency)
- Clear champions and rivalries to study
- Perfect for demonstrating visualization and analysis skills
- Engaging and interesting for data science projects

PROJECT GOALS

1. Collect F1 data from multiple sources (Kaggle, Ergast API)
2. Clean and preprocess the data
3. Create professional visualizations
4. Perform statistical analysis
5. Generate insights about driver performance
6. Document findings in a comprehensive report

COURSE INFORMATION

University: IQRA University Islamabad

Department: Computing & Technology

Course: AIN-375 Data Visualization

Batch: AI-FA-23

Semester: 6th

Instructor: Abdul Baqi Malik

Total Marks: 30

Submission Deadline: 09 June 2026

Presentation Dates: 15-18 June 2026
